

# Natalya Polikashina. Front-end developer.

As a C# developer, I used to spend a lot of time developing desktop applications, and my favorite part was creating user interfaces with Win Forms. During the parental leave, I decided to start learning front-end web development. For this reason, I've been taking courses and do my best to obtain the best practices of modern front-end development.

Responsible, open-minded and friendly, I'm passionate about learning new things. My goal is to improve my skills for building aesthetic and functional web applications.

## Experience

---
